### Alternative Investment Award Austria 2024

1st place in the category "Equity Funds Precious Metals"

### Mountain View Fund Awards 2023

1st place - Equity Funds Sector Precious Metals

### Investment Strategy

The DJE - Gold & Ressourcen is a thematic global equity fund. The concentrated portfolio of 50-70 stocks focuses on companies in the mining, processing and marketing of gold. Equities from the broader commodities universe, such as diversified mining companies, non-ferrous metals, oil and gas, can also be added for further diversification. The investment strategy is completely independent from any benchmark requirements and the share of gold mining stocks can vary between 30 and 100%. With gold as the investment focus, the fund offers diversification and a lower correlation to traditional investment strategies.

### Performance in % since inception (01/12/2017)

The Funds are actively managed by DJE and, where a benchmark index is indicated, without reference to it. The presented charts and tables concerning performance are based on our own calculations according to the gross performance (BVI) method<sup>2</sup> and illustrate past development. Past performance is not indicative for future returns. The BVI method takes into account all costs incurred at the fund level (e.g. management fees), the net performance and the issue fee. Additional individual costs may be incurred at the customer level (e.g. custodian fees, commission and other charges). Model calculation (net): an investor wishes to purchase shares for Euro 1,000. With a maximum issue surcharge of 0.00%, he has to spend a one-off amount of Euro 0.00 when making the purchase. In addition, there may be custodian costs that reduce performance. The custodian costs are decided by your bank's price list and service charges

### Evaluation by MSCI ESG Research

MSCI ESG Rating (AAA-CCC)	AA
ESG Quality Score (0-10)	7.4
Environmental score (0-10)	4.3
Social score (0-10)	5.9
Governance score (0-10)	6.7
ESG Rating compared to Peer Group (100% = best value)	95.00%
Peer Group	Equity Sector Materials (140 Funds)
ESG Coverage	99.01%
Weighted Average Carbon Intensity (tCO <sub>2</sub> e / \$M sales)	427.56

AAA	2.18%	BB	0.00%
AA	64.99%	B	0.00%
A	22.54%	CCC	0.00%
BBB	9.30%	Not Rated	0.99%

### ESG Rating What it means

AAA, AA	<b>Leader:</b> The companies that the fund invests in show strong and/or improving management of financially relevant environmental, social and governance issues. These companies may be more resilient to disruptions arising from ESG events.
A, BBB, BB	<b>Average:</b> The fund invests in companies that show average management of ESG issues, or in a mix of companies with both above-average and below-average ESG risk management.
B, CCC	<b>Laggard:</b> The fund is exposed to companies that do not demonstrate adequate management of the ESG risks that they face, or show worsening management of these issues. These companies may be more vulnerable to disruptions arising from ESG events.
Not Rated	Companies in the fund's portfolio that are not yet rated by MSCI, but these are rated as part of our own analysis.

### Investment Approach

The thematic and globally investing equity fund focuses on gold and precious metals, diversified commodity groups, base metal producers, chemical companies and oil & gas producers. The fund pursues a bottom-up approach with high-quality stock selection, focusing on the fundamental key financial indicators of the companies. We invest primarily in gold producers with a competitive cost structure that generate free cash flows even at lower gold prices. In general, negative or falling real interest rates are positive for tangible assets, particularly gold. Demand for gold is likely to rise if real interest rates are low or fall.

### Investing in the complete cycle

Source: DJE Kapital AG. For illustrative purposes only.

### Opportunities

- + In the long term, high upside potential for stocks of the gold and commodity sector
- + Exchange rate gains in global investments are possible
- + Increasing demand for physical gold due to declining confidence in established currencies and high demand from the emerging market jewellery sector; this should lead to higher gold prices and thus to higher prices for gold mining stocks

### Risks

- Shares in the commodity and precious metals sector are generally more volatile than the overall market
- Currency risks resulting from a high proportion of foreign investments
- In addition to market price risks (equity and currency risks), there are country and credit risks

### Fund Manager

**Stefan Breintner**

Responsible Since 04/12/2017

Stefan Breintner is Head of Research & Portfolio Management and, as an analyst, is responsible for the basic materials, chemicals, energy and construction & materials sectors. Since 2019, he has also been co-fund manager of DJE's dividend strategies. The business economist has been with DJE since 2005.

### DJE Kapital AG

DJE Kapital AG is part of the DJE Group, can draw on around 50 years of experience in asset management and is today one of the leading bank-independent financial service providers in German-speaking Europe. Our investment strategy, both in equities and bonds, is based on the FMM method developed in-house: a systematic analysis which takes three views on securities and the financial markets – fundamental, monetary and market-technical. DJE follows sustainability criteria when selecting securities, takes into account selected sustainable development goals, avoids or reduces adverse sustainability impacts and is a signatory to the United Nations "Principles for Responsible Investment".

### Monthly Commentary

In April, the DJE - Gold & Ressourcen rose by 8.44%. The XAU gold mining index rose by 5.17% in US dollar terms and by 6.32% in euro terms due to the appreciation of the US dollar. Gold mining shares thus outperformed the gold price itself, which rose by 2.53% in USD terms to 2,286.25 per troy ounce and was thus also able to maintain the momentum of the previous month in April. In euro terms, the troy ounce rose by 4.04% to 2,144.76 euros. On the one hand, according to the World Gold Council (WGC), investment demand for gold remained weak throughout the first quarter, with gold ETFs in particular recording outflows. However, this was offset by strong gold purchases (approx. 290 tonnes) by central banks - this is the highest level for a first quarter and the fourth strongest quarter since 2010, when the data series began. The WGC's survey on central bank gold reserves showed that interest rate levels, inflation concerns, geopolitical instability and shifts in the global economy are among the key issues relevant to gold reserve management decisions. Central banks' demand for gold has been growing structurally for some time. This trend should continue. The US Federal Reserve recently postponed an expected cut in key interest rates in view of rising inflation in the US. However, with regard to the US Federal Reserve's monetary policy, postponed is not cancelled. If the rate of inflation falls again, interest rate cuts are likely to be an issue in the US again, which should support the gold price. On the equity side, the strongest results came from the US gold mining group Newmont and the mining companies Pan American Silver (Canada) and Anglo American (UK), among others. On the other hand, the Swiss building materials manufacturer Holcim, the German-American industrial gases manufacturer Linde (headquartered in Dublin) and the Japanese chemicals group Shin-Etsu Chemical, among others, had a negative impact on performance. Gold mining stocks accounted for just over 49% of the portfolio in April (previous month: 47%), with the focus remaining on solidly financed producers that generate positive free cash flows even at lower gold prices and also have some growth prospects. Broad-based commodity/chemical stocks generally underperformed gold mining stocks in April: the MSCI World Materials fell by -1.62%, while the CRB commodity index rose by 1.50% - index figures in euro terms.
