Investment Strategy

DJE - Multi Asset & Trends is a dynamic global multi-asset fund. The diversified portfolio of approximately 50 to 70 equities and between 20 to 40 bonds is managed independent from any benchmark. The fund management pursues a thematic approach to benefit from current and long-term trends, including digital transformation, demographics & health, and clean technologies. The strategy targets companies with stable business models and above-average growth prospects, combined with reasonable valuations. Additional diversification is achieved by investing in up to 10% of the portfolio in gold. The fund seeks to exploit global opportunities to generate an attractive performance.

The Funds are actively managed by DJE and, where a benchmark index is indicated, without reference to it. The presented charts and tables concerning performance are based on our own calculations according to the gross performance (BVI) method² and illustrate past development. Past performance is not indicative for future returns. The BVI method takes into account all costs incurred at the fund level (e.g. management fees), the net performance and the issue fee. Additional individual costs may be incurred at the customer level (e.g. custodian fees, commission and other charges). Model calculation (net): an investor wishes to purchase shares for Euro 1,000. With a maximum issue surcharge of 0.00% , he has to spend a one-off amount of Euro 0.00 when making the purchase. In addition, there may be custodian costs that reduce performance. The custodian costs are decided by your bank's price list and service charges

A	21.68%	CCC	0.00%
BBB	15.44%	Not Rated	11.95%

ESG Rating What it means

AAA, AA	Leader: The companies that the fund invests in show strong and/or improving management of financially relevant environmental, social and governance issues. These companies may be more resilient to disruptions arising from ESG events.
A, BBB, BB	Average: The fund invests in companies that show average management of ESG issues, or in a mix of companies with both above-average and below-average ESG risk management.
B, CCC	Laggard: The fund is exposed to companies that do not demonstrate adequate management of the ESG risks that they face, or show worsening management of these issues. These companies may be more vulnerable to disruptions arising from ESG events.
Not Rated	Companies in the fund's portfolio that are not yet rated by MSCI, but these are rated as part of our own analysis.

Information on the sustainability-relevant aspects of the funds can be found at www.dje.de/en-de/company/about-us/Invest-sustainably/

Investment Approach

The asset allocation of the DJE - Multi Asset & Trends fund follows a consistent bottom-up approach. It is based on fundamental factors such as market positioning, balance sheet and earnings potential, valuation, management quality, and sustainability criteria. The fund management takes a flexible approach to asset classes and allocates across sectors and countries with the aim of managing risk and capitalising on opportunities that arise. Gold is an asset class that has a low correlation with equities and bonds and provides additional stability; it can represent up to 10% of the fund. With the growth-oriented risk-reward profile and broad diversification across different asset classes, the fund aims for attractive returns combined with low volatility.

INVEST IN TODAY'S MEGATRENDS AND TACTICAL THEMES

Source: DJE Kapital AG. For illustrative purposes only.

Opportunities

- + Offensive, theme-oriented, global multi-asset fund with ongoing adjustment of its portfolio to the expected market situation.
- + Equities enable participation in the growth opportunities of the global equity markets independently of benchmark index specifications.
- + Flexible addition of bonds (up to 50%) and other securities such as certificates on precious metals (up to 10% gold) possible.
- + The cash quota (up to 49%) can be used flexibly in order to cushion difficult market phases as much as possible.

Risks

- Share prices can fluctuate relatively strongly due to market, currency and individual value factors.
- Bonds are subject to price risks when interest rates rise, as well as country risks and the creditworthiness and liquidity risks of their issuers.
- In the case of securities not denominated in euros, there is a currency risk for euro investors.
- An investment in precious metals is subject to fluctuations in value.

Fund Manager

Moritz Rehmann

Responsible Since 23/01/2017

Moritz Rehmann joined DJE in 2005 and is an analyst responsible for the banking, insurance and technology sectors. The business economist has been fund manager of DJE - Multi Asset & Trends since 2017 and a member of the DJE strategy team since 2021, which, among other things, determines the allocation of asset classes and sectors.

DJE Kapital AG

DJE Kapital AG is part of the DJE Group, can draw on around 50 years of experience in asset management and is today one of the leading bank-independent financial service providers in German-speaking Europe. Our investment strategy, both in equities and bonds, is based on the FMM method developed in-house: a systematic analysis which takes three views on securities and the financial markets – fundamental, monetary and market-technical. DJE follows sustainability criteria when selecting securities, takes into account selected sustainable development goals, avoids or reduces adverse sustainability impacts and is a signatory to the United Nations "Principles for Responsible Investment".

Monthly Commentary

The stock markets in Europe and North America performed well in May and were largely able to equalise the losses from the previous month. The German share index DAX rose by 3.16% and the broad European share index Stoxx Europe 600 gained 2.63%. The broad US index S&P 500 rose by 3.18%. The Hong Kong Hang Seng Index achieved a weaker but still positive result with a gain of 0.21%. Global equities, as measured by the MSCI World, advanced by 2.62% - all index figures in euro terms. The main driver behind this positive development was once again market expectations that the doves could prevail over the hawks in monetary policy. Weaker labour market data eased concerns that the US economy could overheat. In addition, US inflation fell from 3.5% to 3.4% in April, while core inflation (excluding energy and food) fell from 3.8% to 3.6% - both year-on-year. This rekindled hopes of interest rate cuts by the Fed before the end of the year, especially as the markets have firmly priced in a key interest rate cut by the European Central Bank in June. However, the rally on the stock markets began to stutter around the middle of the month. This was due, among other things, to a rise in inflation in the eurozone from 2.4% to 2.6% and a jump in the Purchasing Managers' Index for the manufacturing sector in the eurozone from 45.7 to 47.3 points. The markets then revised their interest rate expectations. The bond markets reacted very differently to this. In Europe, yields on high-quality government bonds rose slightly. At 2.66%, 10-year German government bonds yielded 8 basis points higher than in the previous month. In contrast, the yield on their US counterparts fell by 18 basis points to 4.50%. The price of gold rose by 1.78% to USD 2,326.99 per troy ounce in May. Shortly before the middle of the month, when hopes of interest rate cuts in the USA were high, a troy ounce briefly cost USD 2,425. In this market environment, the DJE - Multi Asset & Trends rose by 0.84%. The vast majority of sectors on the global equity market performed positively. The strongest results came from the technology, utilities and insurance sectors. By contrast, the automotive, travel & leisure and energy sectors ended the month of May in negative territory. In turn, the fund benefited from its stock selection in the construction & materials, retail and personal care, drugstore & food retailing sectors. In contrast, the automotive, basic materials and telecommunications sectors, among others, had a negative impact on the fund's performance. The strongest individual stock results were delivered by the Japanese department stores' holding company Isetan Mitsukoshi, the US graphics processor developer Nvidia and the US technology group Apple. On the other hand, the Japanese furniture holding company Nitori, the US software company Salesforce and Bank Rakyat Indonesia were among the detractors. Over the course of the month, the fund management adjusted the allocation slightly and increased the weighting of the technology, insurance and financial institutions sectors, among others. In contrast, it reduced the chemical, industrial and healthcare sectors, among others. As a result, the equity allocation rose moderately from 66.81% to 67.39%. The bond ratio remained unchanged from the previous month at 23.57%. The precious metals ratio fell from 7.84% to 7.59% and liquidity from 1.78% to 1.44%.
