Morningstar Rating Overall⁵ ★★★

Investment Strategy

The fund invests primarily in equities, bonds and other securities. In terms of securities selection, preference is given to investments in European issuers, whereby the focus in terms of stock selection is on issuers whose registered office is in the Federal Republic of Germany. Depending on the market situation and the assessment of the investment advisor, stocks or bonds may be overweighted.

The Funds are actively managed by DJE and, where a benchmark index is indicated, without reference to it. The presented charts and tables concerning performance are based on our own calculations according to the gross performance (BVI) method² and illustrate past development. Past performance is not indicative for future returns. The BVI method takes into account all costs incurred at the fund level (e.g. management fees), the net performance and the issue fee. Additional individual costs may be incurred at the customer level (e.g. custodian fees, commission and other charges). Model calculation (net): an investor wishes to purchase shares for Euro 1,000. With a maximum issue surcharge of 5.00%, he has to spend a one-off amount of Euro 50.00 when making the purchase. In addition, there may be custodian costs that reduce performance. The custodian costs are decided by your bank's price list and service charges

| ESG Coverage | 89.55% |
| Weighted Average Carbon Intensity (tCO ₂ e / \$M sales) | 128.71 |

| | | | |
|-----|--------|-----------|--------|
| AAA | 14.14% | BB | 3.71% |
| AA | 31.43% | B | 2.05% |
| A | 23.55% | CCC | 0.00% |
| BBB | 14.66% | Not Rated | 10.45% |

ESG Rating What it means

| | |
|------------|--|
| AAA, AA | Leader: The companies that the fund invests in show strong and/or improving management of financially relevant environmental, social and governance issues. These companies may be more resilient to disruptions arising from ESG events. |
| A, BBB, BB | Average: The fund invests in companies that show average management of ESG issues, or in a mix of companies with both above-average and below-average ESG risk management. |
| B, CCC | Laggard: The fund is exposed to companies that do not demonstrate adequate management of the ESG risks that they face, or show worsening management of these issues. These companies may be more vulnerable to disruptions arising from ESG events. |
| Not Rated | Companies in the fund's portfolio that are not yet rated by MSCI, but these are rated as part of our own analysis. |

Opportunities

- + Asset management character through active risk management
- + Growth opportunities for the globally active European top groups
- + Efficient mix of shares and bonds

Risks

- Country, credit and liquidity risks of issuers
- Price risks of bonds when interest rates rise
- Shares bear the risk of stronger price declines

DJE Invest - Lux Select

Flexible mix of stocks and bonds concentrating on Europe

DJE Kapital AG

DJE Kapital AG is part of the DJE Group, can draw on around 50 years of experience in asset management and is today one of the leading bank-independent financial service providers in German-speaking Europe. Our investment strategy, both in equities and bonds, is based on the FMM method developed in-house: a systematic analysis which takes three views on securities and the financial markets – fundamental, monetary and market-technical. DJE follows sustainability criteria when selecting securities, takes into account selected sustainable development goals, avoids or reduces adverse sustainability impacts and is a signatory to the United Nations "Principles for Responsible Investment".

Monthly Commentary

The stock markets in Europe and North America performed well in May and were largely able to equalise the losses from the previous month. The German stock index DAX rose by 3.16% and the broad European share index Stoxx Europe 600 gained 2.63%. The broad US index S&P 500 rose by 3.18%. The Hong Kong Hang Seng Index achieved a weaker but still positive result with a gain of 0.21%. Global equities, as measured by the MSCI World, advanced by 2.62%. The main driver behind this positive performance was once again market expectations that the doves could prevail over the hawks when it comes to monetary policy. The US Federal Reserve (Fed) announced its intention to sell fewer government bonds and thus adopt a somewhat less steep path for its quantitative tightening in future. At the same time, Fed Chairman Jerome Powell said that an interest rate hike is unlikely to be the next step. As the US labour market also reported fewer newly created jobs in April, concerns about an overheating economy faded. In addition, the inflation rate fell more sharply than expected in April from 3.5% to 3.4% and core inflation (excluding food and energy) from 3.8% to 3.6% - both compared to the previous year. This rekindled hopes of interest rate cuts by the Fed before the end of the year, especially as the markets have firmly priced in a key interest rate cut by the European Central Bank in June. However, the rally on the stock markets began to stutter around the middle of the month, as various data pointed to a persistent inflation trend. For example, the purchasing managers' index for the manufacturing sector in the eurozone surprisingly rose from 45.7 to 47.3 points. Although this means that the index is still below the threshold value of 50, from which an expanding economy is expected, the sharp rise was achieved even without an interest rate cut. In addition, wages in the eurozone rose, which will make a lasting contribution to inflation. And in May, inflation in the eurozone rose again from 2.4% to 2.6% year-on-year. Core inflation also rose from 2.7% to 2.9%. While there had been hopes of several interest rate cuts by the ECB prior to these figures, the markets revised these expectations somewhat. The bond markets reacted very differently to this. In Europe, yields on high-quality government bonds rose slightly. At 2.66%, 10-year German government bonds yielded 8 basis points higher than in the previous month. In contrast, yields on their US counterparts fell by 18 basis points to 4.50% because Powell said an interest rate hike was unlikely. The yield on high-quality European corporate bonds remained virtually unchanged from the previous month at 3.92%, while their US counterparts were 21 basis points lower at 5.52%. European high-yield bonds benefited the most from the prospect of a key interest rate cut by the ECB in June. Their yield fell by 34 basis points to 6.61%, while that of their US counterparts fell by only 11 basis points to 8.00%. Gold rose by 1.78% to USD 2,326.99 per troy ounce in May. Shortly before the middle of the month, when hopes of interest rate cuts in the USA were high, a troy ounce briefly cost USD 2,425.
